BIOLOGICAL PLANT ACTIVATOR

GEAR UP FOR FIRE BLIGHT

As the heat of summer rises, fire blight can roar into a firestorm. Out of control fire blight requires a fire fighting force to eliminate its threat.

When the fire blight alarm sounds, call on the fire fighting team of:

Cueva: Low-load copper with a fatty acid kick for more effective control of bacterial diseases.

Double Nickel LC: Broad spectrum bactericide and fungicide control.

LifeGard WG: The first biological activator that triggers a plant's immune system to snuff out fire blight and other diseases. LifeGard is the only product in FRAC P6. That makes it the ideal choice for managing resistance.
